

ONEM2M TECHNICAL SPECIFICATION		
Document Number	TS-0002-V2.10.2	
Document Name:	Requirements	
Date:	2018-02-27	
Abstract:	The present document contains an informative functional role model and normative technical requirements for oneM2M.	

This Specification is provided for future development work within oneM2M only. The Partners accept no liability for any use of this Specification.

The present document has not been subject to any approval process by the oneM2M Partners Type 1. Published oneM2M specifications and reports for implementation should be obtained via the oneM2M Partners' Publications Offices.

About oneM2M

The purpose and goal of oneM2M is to develop technical specifications which address the need for a common M2M Service Layer that can be readily embedded within various hardware and software, and relied upon to connect the myriad of devices in the field with M2M application servers worldwide.

More information about one M2M may be found at: http://www.oneM2M.org

Copyright Notification

No part of this document may be reproduced, in an electronic retrieval system or otherwise, except as authorized by written permission.

The copyright and the foregoing restriction extend to reproduction in all media.

1 Scope

The present document contains an informative functional role model and normative technical requirements for one M2M.

2 References

2.1 Normative references

References are either specific (identified by date of publication and/or edition number or version number) or non-specific. For specific references, only the cited version applies. For non-specific references, the latest version of the reference document (including any amendments) applies.

The following referenced documents are necessary for the application of the present document.

[1] 3GPP TS 22.368: "Service requirements for Machine-Type Communications (MTC); Stage 1".

2.2 Informative references

References are either specific (identified by date of publication and/or edition number or version number) or non-specific. For specific references, only the cited version applies. For non-specific references, the latest version of the reference document (including any amendments) applies.

The following referenced documents are not necessary for the application of the present document but they assist the user with regard to a particular subject area.

[i.1] oneM2M Drafting Rules.

NOTE: Available at http://www.onem2m.org/images/files/oneM2M-Drafting-Rules.pdf.

[i.2] oneM2M TS-0011: "Common Terminology".

[i.3] oneM2M TR-0008: "Security Analysis".

3 Definitions and abbreviations

3.1 Definitions

For the purposes of the present document, the terms and definitions given in oneM2M TS-0011 [i.2] apply.

3.2 Abbreviations

For the purposes of the present document, the abbreviations given in oneM2M TS-0011 and the following apply:

AE Application Entity

API Application Program Interface

BBF BroadBand Forum
CHA Continua Health Alliance
CPU Central Processing Unit
DM Device Management

GBA Generic Bootstrapping Architecture

GSMA Global System for Mobile Communications Association

GW Gateway

HGI Home Gateway Initiative HSM Hardware Security Module IP Internet Protocol

MTC Machine Type Communications

OMA Open Mobile Alliance

OSR Overall System Requirements OWL Web Ontology Language

QoS Quality of Service

RDF Resource Description Framework

SMS Short Message Service

UICC Universal Integrated Circuit Card USIM UMTS Subscriber Identity Module

USSD Unstructured Supplementary Service Data

WAN Wide Area Network

WLAN Wireless Local Area Network

4 Conventions

The keywords "shall", "shall not", "should", "should not", "may", "need not" in the present document are to be interpreted as described in the oneM2M Drafting Rules [i.1].

NOTE: According to oneM2M Drafting Rules [i.1] in order to mandate a feature in the oneM2M System but allow freedom to the individual deployment whether to use it or not subsequently requirements are often formulated like:

- "The oneM2M System shall support a mechanism [function, capability...] to ..."; or
- "...<u>shall</u> **be able to** ...".

This does not mandate usage of the required feature in a M2M Solution.

5 Introduction to the M2M ecosystem

5.1 Functional roles description

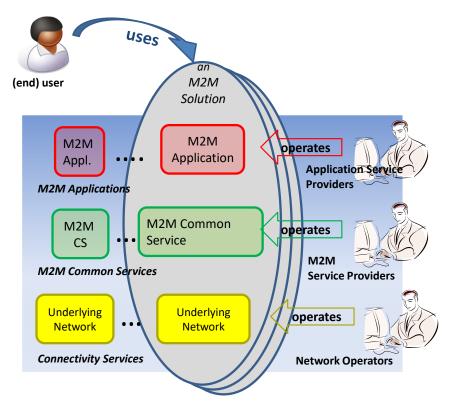

Figure 1: Functional Roles in the M2M Ecosystem

- 1) The *User* (individual or company aka: end-user) fulfils all of the following criteria:
 - Uses an M2M solution.
- 2) The Application Service Provider fulfils all of the following criteria:
 - Provides an M2M Application Service.
 - Operates M2M Applications.
- 3) The M2M Service Provider fulfils all of the following criteria:
 - Provides M2M Services to Application Service Providers.
 - Operates M2M Common Services.
- 4) The Network Operator fulfils all of the following criteria:
 - Provides *Connectivity* and related services for *M2M Service Providers*.
 - Operates an *Underlying Network*. Such an Underlying Network could e.g. be a telecom network.

Any of the above functional roles may coincide with any of the other roles. These functional roles do not imply business roles or architectural assumptions.

6 Functional Requirements

6.1 Overall System Requirements

Table 1: Overall System Requirements

Requirement ID	Description	Release
OSR-001	The oneM2M System shall allow communication between M2M Applications by	Implemented
	using multiple communication means based on IP access.	in Rel-1
OSR-002a	The oneM2M System shall support communication means that can	Implemented
	accommodate devices with constrained computing (e.g. small CPU, memory,	in Rel-1
	battery) or communication capabilities (e.g. 2G wireless modem, certain WLAN	
OSR-002b	node). The oneM2M System shall support communication means that can	Implemented
U3K-002b	accommodate devices with rich computing capabilities (e.g. large CPU,	in Rel-1
	memory) or communication (e.g. 3/4G wireless modem, wireline).	III IXEI- I
OSR-003	The oneM2M System shall support the ability to maintain application-to-	Not
See REQ-2015-	application communication in coordination with an application session for those	implemented
0626R01	M2M Applications that require it.	
OSR-004	The oneM2M System shall support session-less application communications for	Implemented
	those M2M Applications that require it.	in Rel-1
OSR-005	The oneM2M System shall be able to expose the services offered by	Partially
	telecommunications networks to M2M Applications (e.g. SMS, USSD,	implemented
	localization, subscription configuration, authentication (e.g. Generic	(see note 9)
	Bootstrapping Architecture), etc.), subject to restriction based on Network	
	Operator's policy.	
OSR-006	The oneM2M System shall be able to reuse the services offered by Underlying	Partially
	Networks to M2M Applications and/or M2M Services by means of open access	implemented
	models (e.g. OMA, GSMA OneAPI framework). Examples of available services	(see note 10)
	are: • IP Multimedia communications.	
	Messaging.Location.	
	Charging and billing services.	
	 Device information and profiles. 	
	Configuration and management of devices.	
	Triggering, monitoring of devices.	
	Small data transmission.	
	Group management.	
	(see note 1).	
OSR-007	The oneM2M System shall provide a mechanism for M2M Applications to	Implemented
	interact with the Applications and data/information managed by a different M2M	in Rel-1
	Service Provider, subject to permissions as appropriate.	
OSR-008	The oneM2M System shall provide the capability for M2M Applications to	Implemented
	communicate with an M2M Device (i.e. application in the device) without the	in Rel-1
	need for the M2M Applications to be aware of the network technology and the	(see note 11)
000 000	specific communication protocol of the M2M Device.	lasalasa astad
OSR-009	The oneM2M System shall support the ability for single or multiple M2M Applications to interact with a single or multiple M2M Devices/Gateways	Implemented in Rel-1
	(application in the device/gateway) (see note 2).	III Kel-1
OSR-010	The oneM2M System shall support mechanisms for confirmed delivery of a	Implemented
0011-010	message to its addressee to those M2M Applications requesting reliable	in Rel-1
	delivery to detect failure of message within a given time interval.	
OSR-011a	The oneM2M System shall be able to request different communication paths,	Implemented
	from the Underlying Network based on Underlying Network Operator and/or	in Rel-1
	M2M Service Provider policies, routing mechanisms for transmission failures.	(see note 12)
OSR-011b	The oneM2M System shall be able to request different communication paths	Not
	from the Underlying Network based on request from M2M Applications.	implemented
OSR-012	The oneM2M System shall support communications between M2M Applications	Implemented
	and M2M Devices supporting M2M Services by means of continuous or non-	in Rel-1
	continuous connectivity.	

Requirement ID	Description	Release
OSR-013	The oneM2M System shall be aware of the delay tolerance acceptable by the	Implemented
	M2M Application and shall schedule the communication accordingly or request	in Rel-1
	the Underlying Network to do it, based on policies criteria.	
OSR-014	The oneM2M System shall be able to communicate with M2M Devices, behind	Implemented
	an M2M Gateway that supports heterogeneous M2M Area Networks.	in Rel-1
OSR-015	The oneM2M System shall be able to assist Underlying Networks that support	Partially
	different communication patterns including infrequent communications, small	implemented
	data transfer, transfer of large file and streamed communication.	(see note 13
OSR-016	The oneM2M System shall provide the capability to notify M2M Applications of	Implemented
	the availability of, and changes to, available M2M Application/management	in Rel-1
	information on the M2M Device/Gateway, including changes to the M2M Area	
	Network.	
OSR-017	The oneM2M System shall be able to offer access to different sets of M2M	Implemented
	Services to M2M Application Providers. The minimum set of services are:	in Rel-1
	Connectivity management.	
	Device management (service level management).	
	Application Data management.	
	In order to enable different deployment scenarios, these services shall be made	
	available by the oneM2M System, individually, as a subset or as a complete set	
	of services.	
OSR-018	The oneM2M System shall be able to offer M2M Services to M2M Devices	Implemente
	roaming across cellular Underlying Networks, subject to restriction based on	with some
	Network Operator's policy (see note 3).	limitations
		(see note 14
OSR-019	The oneM2M System shall support the capabilities for data repository (i.e. to	Implemente
	collect/store) and for data transfer from one or more M2M Devices or M2M	in Rel-1
	Gateways, for delivery to one or more M2M Gateways, M2M Services	
	Infrastructure, or M2M Application Infrastructure, in ways requested by the M2M	
	Application Infrastructure as listed below:	
	 action initiated either by an M2M Device, M2M Gateway, M2M 	
	Services Infrastructure, or M2M Application Infrastructure;	
	when triggered by schedule or event;	
	for specified data.	
OSR-020	The oneM2M System shall be able to support policies and their management	Implemente
	regarding the aspects of storage and retrieval of data/information.	in Rel-1
OSR-021	The oneM2M System shall be able to provide mechanisms to enable sharing of	Implemente
	data among multiple M2M Applications.	in Rel-1
OSR-022	When some of the components of a M2M Solution are not available (e.g. WAN	Implemented
	connection lost), the oneM2M System shall be able to support the normal	in Rel-1
	operation of components of the M2M Solution that are available.	
OSR-023	The oneM2M System shall be able to identify the M2M Services to be used by	Implemente
	M2M Service Subscriptions (see note 4).	in Rel-1
OSR-024	The oneM2M System shall be able to identify the M2M Devices used by M2M	Implemented
	Service Subscriptions.	in Rel-1
OSR-025	The oneM2M System shall be able to identify the M2M Applications used by	Implemented
	M2M Service Subscriptions.	in Rel-1
OSR-026	If provided by the Underlying Network, the oneM2M System shall be able to	Implemente
00.1.020	associate the M2M Device used by M2M Service Subscriptions with the device	in Rel-1
	identifiers offered by the Underlying Network and the device.	
OSR-027	The oneM2M System shall provide a generic mechanism to support transparent	Not
0011 021	exchange of information between the M2M Application and the Underlying	implemente
	Network, subject to restriction based on M2M Service Provider's policy and/or	Implement
	Network Operator's policy (see note 5).	
OSR-028	The oneM2M System shall enable an M2M Application to define trigger	Not
00.1.020	conditions in the oneM2M System such that the oneM2M System autonomously	implemente
	sends a series of commands to actuators on behalf of the M2M Application	Implement
	when these conditions are met.	
OSR-029	The oneM2M System shall be able to support sending common command(s) to	Implemente
0011-029	each actuator or sensor via a group.	in Rel-1
OCD 000	The oneM2M System shall be able to support the management (i.e. addition,	Implemented
OSR-030	removal, retrieval and update) of the membership of a group.	in Rel-1
OSR-030		
		Implementer
OSR-030 OSR-031	The oneM2M System shall be able to support a group as a member of another	•
OSR-031	The oneM2M System shall be able to support a group as a member of another group.	Implemented in Rel-1
	The oneM2M System shall be able to support a group as a member of another	•

Requirement ID	Description	Release
OSR-033	Based on the Dynamic Device/Gateway Context of the M2M Gateway and/or	Partially
	Device and the defined Event Categories, the oneM2M System shall provide	implemented
	the capability to dynamically adjust the scheduling of reporting and notification	(see note 15
	of the M2M Device/Gateway (see note 17).	
OSR-034	The oneM2M System shall support seamless replacement of M2M Devices as	Not
	well as M2M Gateways (e.g. redirecting traffic, connection, recovery, etc.).	implemented
OSR-035	The oneM2M System shall support the exchange of non-M2M Application	Not
	related relevant information (e.g. Device/Gateway classes) between M2M	implemented
	Device/Gateway and M2M Service Infrastructure for the purpose of efficient	
	communication facilitation. This includes the capability for an M2M Device to	
	report its device class to M2M Service Infrastructure and for the M2M Service	
	Infrastructure to inform M2M Device of the M2M Service Infrastructure	
000 000	capabilities.	N
OSR-036	The oneM2M System should provide mechanisms to accept requests from	Not
000 007	M2M Application Service Providers for compute/analytics services.	implemented
OSR-037	The oneM2M System shall enable an M2M Application to request to send data,	Not
	in a manner independent of the Underlying Network, to the M2M Applications of	implemented
	a group of M2M Devices and M2M Gateways in geographic areas that are	
000 000	specified by the M2M Application.	NI-4
OSR-038	The oneM2M System shall support the inclusion of M2M Application's QoS	Not
000 000	preference in service requests to Underlying Networks.	implemente
OSR-039	The oneM2M System shall be able to authorize service requests with QoS	Not
	preference at service level, but shall pass M2M Application's QoS preference in	implemente
	service requests to Underlying Network for authorization and granting or	
OCD 040	negotiation of the service QoS requests.	Not
OSR-040	The oneM2M System shall be able to leverage multiple communication	Not
	mechanisms (such as USSD or SMS) when available in the Underlying	implemente
OCD 044	Networks.	(see note 16
OSR-041	The oneM2M System shall provide a mechanism, which supports the addition	Partially
	of new M2M Services to the oneM2M System as independent portable modules	implemente
OSR-042	by means of the oneM2M interfaces. The oneM2M System shall be able to support different QoS-levels specifying	(see note 21 Not
USK-042	parameters, such as guaranteed bitrate, delay, delay variation, loss ratio and	implemente
	error rate, etc.	Implemente
OSR-043	The oneM2M System shall be able to verify that members of a group support a	Implemente
00IX-0 1 3	common set of functions.	in Rel-1
OSR-044	The oneM2M System shall support communication with M2M Devices which	Implemente
0011011	are reachable based on defined time schedules (e.g. periodic) as well as M2M	in Rel-1
	Devices which are reachable in an unpredictable and spontaneous manner.	
OSR-045a	The oneM2M System shall be able to receive and utilize information provided	Not
0011 0 100	by the Underlying Network about when an M2M Device can be reached.	implemente
OSR-045b	The oneM2M System shall be able to utilize reachability schedules generated	Partially
0011 0 105	by either the M2M Device or the Infrastructure Domain.	implemente
	by Guilor the Wizivi Bevice of the initiastracture Bornain.	(see note 18
OSR-046	The oneM2M System shall be able to support a capability for the M2M	Not
0011010	Application to request/disallow acknowledgement for its communication.	implemente
OSR-047	The oneM2M System shall be able to support mechanism for the M2M Devices	Implemente
0011011	and/or Gateways to report their geographical location information to M2M	in Rel-1
	Applications (see note 7).	
OSR-048	The oneM2M System shall provide an M2M Service that allows M2M Devices	Implemente
	and/or Gateways to share their own or other M2M Devices' geographical	in Rel-1
	location information (see note 7).	
OSR-049	The oneM2M System shall be able to provide the capability for an M2M	Implemente
	Application to selectively share data (e.g. access control) among applications.	in Rel-1
OSR-050	If communication over one communication channel provided by the Underlying	Implemente
	Network can only be triggered by one side (Infrastructure Domain or Field	in Rel-1
	Domain), and alternative channel(s) is (are) available in the other direction, the	
	oneM2M System shall be able to use the alternative channel(s) to trigger	
	bidirectional communication on the first channel.	<u> </u>
	Depending on availability of suitable interfaces provided by the Underlying	Implemente
OSR-051		in Rel-1
OSR-051	Network the oneM2M System shall be able to request the Underlying Network	
OSR-051	to broadcast/multicast data to a group of M2M Devices in a specified area.	
OSR-051 OSR-052		Not
	to broadcast/multicast data to a group of M2M Devices in a specified area. The oneM2M System shall be able to select an appropriate Underlying Network to broadcast or multicast data depending on the network's broadcast/multicast	
	to broadcast/multicast data to a group of M2M Devices in a specified area. The oneM2M System shall be able to select an appropriate Underlying Network	Not

Requirement ID	Description	Release
OSR-053	The oneM2M System shall provide a means that enables backward	Not
000 054	compatibility of interfaces among different releases (see note 8).	implemented
OSR-054	The oneM2M System shall be able to support an M2M Application, M2M	Implemented
	Device, or M2M Gateway to obtain access to resources of another M2M	in Rel-1
OSR-055	Application, M2M Device, or M2M Gateway. The oneM2M System shall be able to provide the capability of M2M	Implemented
O3K-033	Applications to exchange data with one or more authorized M2M Applications	in Rel-1
	which are not known in advance.	(see note 20)
OSR-056	The oneM2M System shall enable discovery of usable M2M Applications on an	Implemented
0011 000	M2M Gateway or at an M2M Device .	in Rel-1
OSR-057	The oneM2M System shall enable discovery of M2M Gateways and M2M	Implemented
	Devices available to an M2M Application for data exchange.	in Rel-1
OSR-058	The oneM2M System shall be able to provide time stamps as needed by	Implemented
	Common Service Functions.	in Rel-1
OSR-059	The oneM2M System shall be able to support Role-Based Access Control	Implemented
	based on M2M Service Subscriptions.	in Rel-1
OSR-060	The oneM2M System should support time synchronization with an external	Not
	clock source.	implemented
OSR-061	M2M Devices and M2M Gateways may support time synchronization within the	Not
	oneM2M System.	implemented
OSR-062	The oneM2M System shall enable means of testing the connectivity towards a	Not
	set of M2M Applications.	implemented
OSR-063	The oneM2M System shall be able to manage the scheduling of M2M Service	Implemented
	Layer connectivity and messaging between the Infrastructure Domain and M2M	in Rel-1
000.004	Devices/Gateways.	
OSR-064	The oneM2M System shall be able to aggregate messages depending on	Implemented
000 005	message delay tolerance and/or category.	in Rel-1
OSR-065	The oneM2M System shall provide mechanisms that enable a M2M Service	Not
	Provider to distribute processing functions to his M2M Devices/Gateways in the Field Domain	implemented
OSR-066	The oneM2M System shall be able to support the placement and operation of	Implemented
O3N-000	M2M Applications in selected M2M Nodes per criteria requested by M2M	in Rel-1
	Application Service Providers, subject to access rights.	III IXEI- I
OSR-067	The oneM2M System shall be able to take operational and management action	Implemented
0011 007	as requested by M2M Applications.	in Rel-1
OSR-068	When available from an Underlying Network, the oneM2M System shall be able	Not
	to provide the capability to retrieve and report the information regarding whether	implemented
	an M2M Device is authorized to access Underlying Network services.	
OSR-069	When available from the Underlying Network, the oneM2M System shall be	Not
	able to maintain the M2M Service Operational Status of a M2M Device and	implemented
	update it when the Underlying Network connectivity service status changes.	
OSR-070	The oneM2M System shall be able to provide the capability to notify an	Partially
	authorized M2M Application when the M2M Service Administrative State or	implemented
	M2M Service Operational Status of an M2M Device changes, if that M2M	(see note 19)
	Application has subscribed for such notifications.	
OSR-071	The oneM2M System shall be able to enable an authorized M2M Application to	Implemented
	set the M2M Service Administrative State of a M2M Device.	in Rel-1
OSR-072	The oneM2M System shall be able to initiate a set of actions defined by a M2M	Not
	Application (e.g. trigger upon a threshold, compare a value,) that impacts	implemented
000.070	another Application	N1-4
OSR-073	The oneM2M System shall support distributed transactions to multiple devices	Not
See REQ-2015-	or applications where the transaction includes the characteristics of atomicity,	implemented
0529R03 OSR-074	consistency, isolation and durability. The oneM2M System shall support the completion of distributed transactions to	Not
See REQ-2015-	multiple devices or applications while maintaining the order of the operations	
0529R03	and performing the transaction within a given time frame.	implemented
OSR-75	The oneM2M System shall be able to collect, store Time Series Data.	Implemented
See REQ-2015-	THE OHENIZIVI CYSTEIN SHAII DE ADIE LU CUIIECL, STOTE TIME SELIES DATA.	in Rel-2
0546R01		1111101-2
OSR-76	The oneM2M System shall be able to detect and report the missing data in time	Implemented
	series.	in Rel-2
See REQ-2015-		

Requirement ID	Description	Release
OSR-077	The oneM2M System shall be capable of collecting asynchronous responses	Not
See REQ-2015-	pertaining to the broadcasted messages.	implemented
0558R01		
OSR-078	The oneM2M System shall support gateway-based capabilities for Event	Not
See REQ-2015- 573R01	management, e.g. capability for arbitration of the resulting processing.	implemented
OSR-079	The oneM2M System shall provide the capability to notify a device hosting a	Not
See REQ-2015-	group of applications when alternative registration points for that group of	implemented
574R01	applications are available (e.g. via different underlying networks) based on the service requirements of each of the applications hosted.	
OSR-080	The oneM2M System shall provide the capability to register applications in	Not
See REQ-2015- 574R01	group or independently, based on their service requirements.	implemented
OSR-081	The oneM2M System shall be able to collect data that is broadcast (e.g. in	Not
See REQ-2015- 0553R02	industrial bus systems) according to data collection policies.	implemented
OSR-082	The oneM2M System shall allow the update, modification, or deletion of data	Not
See REQ-2015- 0553R02	collection policies within an M2M Application.	implemented
OSR-083	The oneM2M System shall be able to filter information from oneM2M Devices	Not
See REQ-2015- 0593R02	for a given set of parameters.	implemented
OSR-084	The oneM2M System shall be able to handle an event notification from an	Not
See REQ-2015-	authorized M2M Application which triggers actions to be performed on the M2M	implemented
0595R04	Device (example: Turn on or off the monitoring).	
OSR-085	The oneM2M System shall support resource caching of registered M2M	Not
See REQ-2015-	Devices. Resource caching is a mechanism through which the oneM2M System	implemented
0608	retains resources of a registered M2M Device in temporarily inactive state by	'
	moving the resources to a temporary storage e.g. cache bin.	
OSR-086	The oneM2M System shall enable M2M Gateways to discover M2M	Implemented
See REQ-2015- 0611R02	Infrastructure Nodes and M2M Devices available for data exchange.	in Rel-1
OSR-087	The oneM2M System shall enable M2M Infrastructure Nodes and M2M Device	Implemented
See REQ-2015- 0611R02	to discover M2M Gateways available for data exchange.	in Rel-1
OSR-088	The oneM2M System shall be able to support the capabilities for data	Implemented
See REQ-2015-	repository (i.e. to collect/store) and for data transfer among authorized M2M	in Rel-1
0611R02	Devices and M2M Gateways via M2M Area Networks by only involving the field domain.	
OSR-089	The oneM2M System shall enable the cancellation of continuous data collection	Not
See REQ-2015- 0620	and/or the deletion of collected data when pre-defined conditions are met.	implemented
OSR-090	The oneM2M System shall be able to forward the M2M Application Data to	Partially
See REQ-2015-	M2M Application without storing the Data.	implemented
0622R02		(see note 22)
OSR-091	The oneM2M System shall be able to notify interested oneM2M entities when it	Not
See REQ-2015-	detects forwarded M2M Application Data was not delivered within expected	implemented
0622R02	time duration.	
OSR-092	The oneM2M System shall provide the capability for monitoring and describing	Not
See REQ-2015- 0629	data streams with associated attributes e.g. data freshness, accuracy, sampling rate, data integrity.	implemented
OSR-093	The oneM2M System shall support transaction management to multiple devices	Not
See REQ-2015-	or applications providing policy based mechanism that should be invoked	implemented
0630	(e.g. keep status, re-schedule, rollback) depending on the outcome of the desired operation.	
OSR-094	The oneM2M System shall provide Information Model(s) to support	Implemented
See REQ-2015- 0631R02	interoperability among different devices/applications.	in Rel-2
OSR-095	The oneM2M System should provide mappings between different Information	Not
See REQ-2015- 0631R02	Models from non-oneM2M System(s).	implemented
OSR-096	The oneM2M System should be able to interwork with non-oneM2M System(s).	Implemented
See REQ-2015-	John Street Stre	in Rel-2
0631R02		

Requirement ID	Description	Release
OSR-097	The oneM2M System shall be able to share data collection policies among	Not
See REQ-2015-	multiple M2M Devices/Gateways within an M2M Application Service, or among	implemented
0583R01	different M2M Application Services.	
OSR-098	The oneM2M system shall be able to support machine socialization	Not
See REQ-2016-	functionalities (such as existence discovery, correlated task discovery,	implemented
0055R02	message interface discovery and process optimization for multiple machines	
	with same tasks).	
OSR-099	The oneM2M system shall enable continuity of services to M2M devices as they	Implemented

0031R05		

Requirer	nent ID	Description	Release
NOTE 1:	The set of	of features or APIs to be supported depends on the M2M Common Services and a	ccess to
	available	APIs.	
NOTE 2:	The relat	ion M2M Network Application to M2M Device/Gateway may be 1:1, 1:n, n:1 and/or	r n:m.
NOTE 3:	No roam	ing on M2M Service level is assumed by this requirement.	
NOTE 4:	M2M Sei	vice Subscriptions are not Application subscriptions (e.g. Home Energy Managem	ient).
NOTE 5:	Transpar	ent exchange of information implies information that is mainly interpreted by the M	12M

- Application and the Underlying Network Provider. NOTE 6: Based on the Event Categories and via interworking with Underlying Networks, the oneM2M System can support differentiated services (by providing Quality-of-Service) requested by M2M Applications.
- NOTE 7: Geographical location information can be more than simply longitude, latitude and Geo-fence event.
- NOTE 8: "means" above does not imply only technical mechanisms, e.g. there is no protocol version negotiation. NOTE 9: In Rel-1 only GBA and localization are available.
- NOTE 10: Rel-1 covers: Location, Charging and billing services, Configuration and management of devices, Device information and profiles, Triggering.
- NOTE 11: This requirement applies to M2M Devices but not to devices interworked via M2M Area Networks.
- NOTE 12: Based on device triggering.
- NOTE 13: No Support for streamed communication.
- NOTE 14: Limitations to trigger (via Tsp interface) devices in a roamed-to network.
- NOTE 15: Detail syntax to describe Dynamic Context is not specified.
- NOTE 16: It is possible to deliver CoAP over SMS, but currently SMS message delivery interfaces are not explicitly defined.
- NOTE 17: For example, if the battery of Gateway is remained only 10% or below, the Gateway notifies the M2M service platform of the status. The M2M Application in the Infrastructure node will adjust the scheduling of reporting and notification based on the Event Categories associated with each message. Consequently, the M2M Gateway operates longer.
- NOTE 18: Void.
- NOTE 19: Only the M2M Service Administrative State can be notified. M2M Service Operational Status is not implemented.
- NOTE 20: This can be implemented based on preconfigured access rights.
- NOTE 21: In Rel-1 this is supported by means of the Mca interfaces, mapping the new service module to an AE.
- NOTE 22: In Rel-2 data are stored in the CSE but never get retrieved by other entities except by subscribe/notify mechanism.
- NOTE 23: Unicast communications have been implemented in Release 1.
- NOTE 24: Definition of "real time" and how to specify timing and reliability requirments is TBD

6.2 Management Requirements

Table 2: Management Requirements

Requirement ID	Description	Release
MGR-001	The oneM2M System shall be able to support management and configuration of	Implemented
	M2M Gateways/ Devices including resource constrained M2M Devices.	in Rel-1
MGR-002	The oneM2M System shall provide the capability to discover the M2M Area	Implemented
	Networks including information about devices on those networks and the	in Rel-1
	parameters (e.g. topology, protocol) of those networks.	
MGR-003	The oneM2M System shall be able to provide the capability to maintain and	Implemented
	describe the management Information Model of devices and parameters	in Rel-1
	(e.g. topology, protocol) of M2M Area Networks.	
MGR-004	The oneM2M System shall support common means to manage devices	Implemented
	enabled by different management technologies (e.g. OMA DM, BBF TR069).	in Rel-1
MGR-005	The oneM2M System shall provide the capability to manage multiple devices in	Implemented
	a grouped manner.	in Rel-1
MGR-006	The oneM2M System shall provide the capability for provisioning and	Implemented
	configuration of devices in M2M Area Networks.	in Rel-1
MGR-007	The oneM2M System shall provide the capability for monitoring and diagnostics	Implemented
	of M2M Gateways/Devices in M2M Area Networks.	in Rel-1
MGR-008	The oneM2M System shall provide the capability for software management of	Implemented
	devices in M2M Area Networks.	in Rel-1
MGR-009	The oneM2M System shall provide the capability for rebooting and/or resetting	Implemented
	of M2M Gateways/Devices and other devices in M2M Area Networks.	in Rel-1
MGR-010	The oneM2M System shall provide the capability for authorizing devices to	Implemented
	access M2M Area Networks.	in Rel-1

Requirement ID	Description	Release	
MGR-011	The oneM2M System shall provide the capability for modifying the topology of	Implemented	
	devices in M2M Area Networks, subject to restriction based on M2M Area	in Rel-1	
	Network policies.		
MGR-012	Upon detection of a new device the M2M Gateway shall be able to be	Partially	
	provisioned by the M2M Service Infrastructure with an appropriate configuration	implemented	
	which is required to handle the detected device.	(see note)	
MGR-013	Void.		
MGR-014	The oneM2M System shall be able to retrieve events and information logged by	Implemented	
	M2M Gateways/ Devices and other devices in M2M Area Networks.	in Rel-1	
MGR-015	The oneM2M System shall be able to support firmware management	Implemented	
	(e.g. update) of M2M Gateways/ Devices and other devices in M2M Area	in Rel-1	
	Networks.		
MGR-016	The oneM2M System shall be able to retrieve information related to the Static	Implemented	
	and Dynamic Device/Gateway Context for M2M Gateways/Devices as well as	in Rel-1	
	Device Context for other devices in M2M Area Networks.		
MGR-017	The oneM2M System shall be capable of correlating Access Management	Implemented	
	elements provided by the technology specific Device Management Protocols to	in Rel-1	
	Access Management elements used by the oneM2M System.		
MGR-018	The M2M Service Infrastructure shall be able to accept standardized	Not	
See REQ-2015-	configuration settings from an external configuration server to allow the M2M	implemented	
0555R02	Devices to register.		
MGR-019	The M2M Device shall be able to accept standardized configuration settings	Not	
See REQ-2015-	from an external configuration server in order to register to the oneM2M	implemented	
0555R02	System.		
	NOTE: In Rel-1 no detection mechanism exists, but once an M2M Device is known at the Gateway it can be		
configured via the GW through DM.			

6.3 Semantics Requirements

6.3.1 Ontology Related Requirements

Table 3: Ontology Requirements

Requirement ID	Description	Release
ONT-001 See REQ-2015- 0521R01	The M2M System shall support a standardized format for the rules/policies used to define service logic.	Not implemented
ONT-002 See REQ-2015- 0521R01	The M2M System shall support modelling semantic descriptions of Things (including relationships among them) by using ontologies.	Implemented in Rel-2
ONT-003 See REQ-2015- 0521R01	The M2M System shall support a common modelling language for ontologies (e.g. OWL).	Implemented in Rel-2
ONT-004 See REQ-2015- 0521R01	The M2M System should be able to provide translation capabilities from different modelling languages for ontologies to the language adopted by oneM2M if the expressiveness of the imported ontology allows.	Not implemented
ONT-005 See REQ-2015- 0521R01	The M2M System shall provide the capability to retrieve semantic descriptions and ontologies stored outside of the M2M System.	Not implemented
ONT-006 See REQ-2015- 0521R01	The M2M System shall provide support for linking ontologies defined in the context of the M2M System with ontologies defined outside this context.	Not implemented
ONT-007 See REQ-2015- 0521R01	The M2M System shall be able to support extending ontologies in the M2M System.	Not implemented
ONT-008 See REQ-2015- 0521R01	The M2M System shall be able to use ontologies that contain concepts representing aspects (e.g. a room) that are not represented by resources of the M2M System.	Implemented in Rel-2
ONT-009 See REQ-2015- 0521R01	The M2M System shall be able to re-use common ontologies (e.g. location, time ontologies, etc.) which are commonly used in M2M Applications.	Not implemented

Requirement ID	Description	Release
ONT-010	The M2M System shall be able to support simultaneous usage of multiple	Implemented
See REQ-2015-	ontologies for the same M2M resource.	in Rel-2
0521R01		
ONT-011	The M2M System shall provide the capability for making ontology available in	Not
See REQ-2015-	the M2M System, e.g. through announcement.	implemented
0521R01		
ONT-012	The M2M System shall be able to support mechanisms to import external	Not
See REQ-2015-	ontologies into the M2M System.	implemented
0521R01		
ONT-013	The M2M System shall be able to support update of ontologies.	Not
See REQ-2015-		implemented
0521R01		
ONT-014	The M2M System shall enable functions for data conversion based on	Not
See REQ-2015-	ontologies.	implemented
0521R01		
ONT-015	The M2M System shall be able to model devices based on ontologies which	Implemented
See REQ-2015-	may be available outside the M2M System (e.g. HGI device template).	in Rel-2
0521R01		
ONT-016	The M2M System shall support storage, management and discovery of	Not
See REQ-2015-	ontologies.	implemented
0521R01		
ONT-017	The oneM2M System shall support a semantic relation ("Is Paired To")	Not
See REQ-2015-	between two M2M Devices.	implemented
0609		

Semantics Annotation Requirements 6.3.2

Table 4: Semantics Annotation Requirements

Requirement ID	Description	Release
ANN-001	The oneM2M System shall provide capabilities to manage semantic information	Implemente
See REQ-2015-	about the oneM2M resources, e.g. create, retrieve, update, delete,	d in Rel-2
0521R01	associate/link.

0521R01		·

6.4 Security Requirements

Table 9: Security Requirements

Requirement ID	Description	Release
SER-001	The oneM2M System shall incorporate protection against threats to its availability such as Denial of Service attacks.	Partially Implemented in Rel-1
SER-002	The oneM2M System shall be able to ensure the Confidentiality of data.	Implemented in Rel-1
SER-003	The oneM2M System shall be able to ensure the Integrity of data.	Implemented in Rel-1
SER-004	In case where the M2M Devices support USIM/UICC and the Underlying Networks support network layer security, the oneM2M System shall be able to leverage device's USIM/UICC credentials and network's security capability e.g. 3GPP GBA for establishing the M2M Services and M2M Applications level security through interfaces to Underlying Network.	Implemented in Rel-1
SER-005	In case where the M2M Devices support USIM/UICC and the Underlying Networks support network layer security, and when the oneM2M System is aware of Underlying Network's bootstrapping capability e.g. 3GPP GBA, the oneM2M System shall be able to expose this capability to M2M Services and M2M Applications through API.	Implemented in Rel-1
SER-006	In case where the M2M Devices support USIM/UICC and the Underlying Networks support network layer security, the oneM2M System shall be able to leverage device's USIM/UICC Credentials when available to bootstrap M2M Security Association.	Implemented in Rel-1
SER-007	When some of the components of an M2M Solution are not available (e.g. WAN connection lost), the oneM2M System shall be able to support the Confidentiality and the Integrity of data between authorized components of the M2M Solution that are available.	Implemented in Rel-1
SER-008	The oneM2M System shall support countermeasures against unauthorized access to M2M Services and M2M Application Services.	Implemented in Rel-1
SER-009	The oneM2M System shall be able to support Mutual Authentication for interaction with Underlying Networks, M2M Services and M2M Application Services.	Implemented in Rel-1
SER-010	The oneM2M System shall be able to support mechanisms for protection against misuse, cloning, substitution or theft of security credentials.	Implemented in Rel-1
SER-011	The oneM2M System shall protect the use of the identity of an M2M Stakeholder within the oneM2M System against discovery and misuse by other stakeholders.	Implemented in Rel-1
SER-012	The oneM2M System shall be able to support countermeasures against Impersonation attacks and replay attacks.	Partially implemented in Rel-1 (see note 3)
SER-013	The oneM2M System shall be able to provide the mechanism for integrity-checking on boot, periodically on run-time, and on software upgrades for software/hardware/firmware component(s) on M2M Device(s).	Not implemented
SER-014	The oneM2M System shall be able to provide configuration data to an authenticated and authorized M2M Application in the M2M Gateway/Device.	Implemented in Rel-1
SER-015	The oneM2M System shall be able to support mechanisms to provide M2M Service Subscriber identity to authorized and authenticated M2M Applications when the oneM2M System has the M2M Service Subscriber's consent.	Partially implemented (see note 4)
SER-016	The oneM2M System shall be able to support non repudiation within the M2M service layer and in its authorized interactions with the network and application layers.	Implemented in Rel-1
SER-017	The oneM2M System shall be able to mitigate threats identified in oneM2M TR-0008 [i.3].	Implemented in Rel-1
SER-018	The oneM2M System shall enable an M2M Stakeholder to use a resource or service and be accountable for that use without exposing its identity to other stakeholders.	Partially implemented
SER-019	The oneM2M System shall be able to use service-level Credentials present inside the M2M Device for establishing the M2M Services and M2M Applications level security.	Implemented in Rel-1
SER-020	The oneM2M System shall enable legitimate M2M Service Providers to provision their own Credentials into the M2M Devices/Gateways.	Implemented in Rel-1 (see note 5)

security Credentials in M2M Devices and/or M2M Gateways. SER-022 The oneM2M System shall enable M2M Applications Service Providers to authorize interactions involving their M2M Applications on supporting entities (e.g., Devices/ Gateways/ Service infrastructure). SER-023 Where a Hardware Security Module (HSM) is supported, the oneM2M System shall be able to rely on the HSM to provide local security. SER-024 The oneM2M System shall enable M2M Applications to use different and segregated security environments. SER-025 The oneM2M System shall be able to prevent unauthorized M2M Stakeholders from identifying and/or observing the actions of other M2M Stakeholders in the oneM2M System shall be able to provide mechanism for the protection of Confidentiality of the geographical location information (see note 1). SER-027 SER-027 SER-027 The oneM2M System shall be able to provide mechanism for the protection of Confidentiality of the geographical location information (see note 2). SER-027 The oneM2M System shall support grouping of M2M Applications that have the same access control rights towards one specific resources, together so that access control validation can be performed by validating if the M2M Application is a member of certain group. SER-028 SER-02015- 0568R04 The oneM2M System shall enable security protocol end-points to protect portions of individual application-generated data so that intermediate entities (whether trusted or untrusted) forwarding the data are unable to access the protected portions of the data in clear text. The oneM2M System shall enable security protocol end-points to protect portions of individual application-generated data so that security protocol end-points can detect modification, including modification by intermediate service layer entities (whether trusted or untrusted) forwarding the messages are unable to access the protected portions of the messages in clear text. See REQ-2017-	appropriate method such as digital signature.	in Rel-2
0030R05	appropriate method such as digital signature.	III Nei-2
	The oneM2M System shall be able to support security mechanisms to protect	Dorticlly
SER-070 See REQ-2017-		Partially
	cryptographic keys and cryptographic operations by using tamper resistant	Implemented
0030R05	elements such as TPM (Trusted Platform Module), HSM (Hardware Security	Note 7
OED 074	Module) and SIM (Subscriber Identity Module).	
SER-071	The oneM2M System shall be able to support processing and granting of	Implemented
See REQ-2017-	requests based on access rights of a resource if the required conditions are	in Rel-1
0030R05	met	
SER-072	The oneM2M System shall provide privacy protection mechanisms at the	Implemented
See REQ-2017-	central server.	in Rel-2
0030R05		
SER-073	The oneM2M system shall be able to support authentication using device key	Rel-3?
See REQ-2017-	and the integrity check of M2M Device(s).	
0031R05		
SER-074	The oneM2M system shall be able to support anonymization of the t information	Rel-3/future
See REQ-2017-	being provided, when requested by M2M Applications	releases?
0031R05		
SER-075	The oneM2M System shall apply appropriate security levels for Applications	Rel-3/future
See REQ-2017-	that can have safety impacts (e.g. protection from malicious attacks)	releases?

Requirer	ment ID	Description	Release
NOTE 1:	The abov	ve requirement does not cover items outside of the oneM2M System, e.g. Underlyi	ng Networks.
NOTE 2:	Geograp	hical location information can be more than simply longitude and latitude.	
		pported for Impersonation attacks not supported for Replay attacks.	
NOTE 4:		M2M System has no means to verify a subscriber's consent. This requirement is or ation level.	nly fulfillable
NOTE 5:	Regardir only.	ng remote provisioning, Release 1 supports remote provisioning of symmetric key of	credentials
NOTE 6:	service p	device may include e.g. firmware managed by an OEM vendor, middleware mana provider and software managed by an application provider. The entity managing a selesigned as "allowed stakeholder" in the requirements above.	
NOTE 7:	Support	for SIM is supported in Release 1 and Release 2.	

6.5 Charging Requirements

Table 10: Charging Requirements

Requirement ID	rement ID Description Releas	
CHG-001	The oneM2M System shall support collection of charging specific information	Implemented
	related to the individual services facilitated by the oneM2M System (e.g. Data	in Rel-1
	Management, Device Management and/or Connectivity Management).	(see note 4)
	Collection of charging specific information shall be possible concurrent with the	
	resource usage. The format of the recorded information shall be fully specified including mandatory and optional elements.	
CHG-002	The oneM2M System shall support mechanisms to facilitate correlation of	Partially
0110-002	charging information (e.g. of a User) collected for M2M Services, M2M	implemented
	Application Services and services provided by Underlying Network Operators.	(see note 2)
CHG-003	The oneM2M System shall provide means to coordinate charging data records	Not
	for data usages with differentiated QoS from the Underlying Network.	implemented
CHG-004	The oneM2M System shall be able to utilize existing charging mechanisms of	Not
	Underlying Networks.	implemented
		(see note 3)
CHG-005	The oneM2M System shall support transfer of the charging information records	Implemented
	to the billing domain of the M2M Service Provider, for the purpose of:	in Rel-1
	subscriber billing;	
	inter-provider billing;	
	provider-to-subscriber accounting including additional functions like	
0110 000	statistics.	N1-4
CHG-006	The oneM2M System should support generation of charging events for the	Not
	purpose of requesting resource usage Authorization from the real time credit control system where the subscriber account is located. The information	implemented
	contained in the charging events and the relevant chargeable events shall be	
	fully specified including mandatory and optional elements (see note 1).	
CHG-007	The oneM2M System shall support mechanisms to correlate charging	Rel-3/future
See REQ-2017-	information (e.g. data/records) from different M2M Application Service	releases?
0031R05	Providers.	
NOTE 1: A chargeable event is any activity, a provider may want to charge for that utilizes the resources and		
related M2M Services offered by such provider. A charging event is the set of charging information		
needed by the credit control system for resource authorization.		
NOTE 2: Information collected can be sent to the Underlying Networks which may used it for charging.		

NOTE 3: The oneM2M service layer can pass info to Underlying Networks but cannot use Underlying Network mechanism. Charging can be done by Underlying Network. This is covered by CHG-002.

NOTE 4: Only supported in the Infrastructure Node.

6.6 Operational Requirements

Table 11: Operational Requirements

Requirement ID	Description	Release
OPR-001	The oneM2M System shall provide the capability for monitoring and diagnostics	Implemented
	of M2M Applications.	in Rel-1
OPR-002	The oneM2M System shall provide the capability for software management of	Implemented
	M2M Applications.	in Rel-1
OPR-003	The oneM2M System shall be able to configure the execution state an M2M	Implemented
	Application (start, stop, restart).	in Rel-1
OPR-004	When suitable interfaces are provided by the Underlying Network, the oneM2M	Not
	System shall have the ability to schedule traffic via the Underlying Network	implemented
	based on instructions received from the Underlying Network.	
OPR-005	The oneM2M System shall be able to exchange information with M2M	Implemented
	Applications related to usage and traffic characteristics of M2M Devices or M2M	in Rel-2
	Gateways by the M2M Application. This should include support for the 3GPP	
	feature called: "Time controlled" (see note).	
OPR-006	Depending on availability of suitable interfaces provided by the Underlying	Implemented
	Network the oneM2M System shall be able to provide information related to	in Rel-2
	usage and traffic characteristics of M2M Devices or M2M Gateways to the	
000 007	Underlying Network.	N
OPR-007	The oneM2M System shall be able to support receipt of the status information	Not
See REQ-2015-	of the Underlying Network if supported by the Underlying Network.	implemented
0550R03	TI MONO A LINE II A MONO B C C C	N
OPR-008	The oneM2M System shall be able to provide the M2M Applications with status	Not
See REQ-2015-	information received from the Underlying Network.	implemented
0550R03	The fewer of fewer sistens of Asia IDs about to a single fewer of the boundary of	
OPR-009	The format for registered App-IDs shall be able to support use by people and	Implemented
See 0585R01-	systems to readily determine whether the App-ID is registered and the	in Rel-2
App-ID	Registration Authority which issued the App-ID, App Developer and App Name.	
Requirements	The ampNOM Custom Desiretistics Authorities about he able to called and	luna un la una a un ta al
OPR-010	The oneM2M System Registration Authorities shall be able to collect and	Implemented
See 0585R01-	maintain supporting required information when assigning an App-ID.	in Rel-2
App-ID		
Requirements		200 [4]
NOTE: "Time co	ontrolled" is equivalent to the MTC Features specified in clause 7.2 of 3GPP TS 22	J08 [1].

6.7 Communication Management Requirements

Table 12: Communication Management Requirements

Requirement ID	Description	Release
CMR-001	The oneM2M System shall provide to M2M Applications a communication	Implemented
	service which provides buffering of messages to/from M2M Gateway/Device/	in Rel-1
	Infrastructure Domain.	
CMR-002	The oneM2M System shall be able to support forwarding buffered messages	Implemented
	depending on communication policies and based on service preference	in Rel-1
	associated with the buffered messages.	
CMR-003	The oneM2M System shall enable an M2M Application to send a	Implemented
	communication request with the following service preference:	in Rel-1
	 QoS parameters, including delay tolerance, for initiating the delivery of 	
	data;	
	 categorizing communication requests into different levels of priority or 	
	QoS classes.	
CMR-004	The oneM2M System shall be able to support concurrent processing of	Implemented
	messages within M2M Gateways and/or M2M Devices from different sources	in Rel-1
	with awareness for the service preference associated with the messages while	
	observing the provisioned communication policies.	
CMR-005	The oneM2M System shall be able to maintain context associated with M2M	Partially
	sessions (e.g. security context or network connectivity context during the	implemented
	interruption of the session).	(see note 1)

Requirement ID	Description		
CMR-006	The oneM2M System shall support the ability for applications to categorize		
See REQ-2015-	requested communications (priority, importance, etc.), so that the oneM2M		
0564R02	System can adapt its actual communications (scheduling, aggregation,		
	compression, etc.) by taking this categorization into account.	Partially	
CMR-007	The oneM2M System shall support configurable communication policies that		
See REQ-2015-	will define its communication patterns. Such policies shall take into account		
0564R02	information received from the Underlying Network (such as information referred		
	to in OPR-004) as well as information received from the Applications (such as		
	the information referred to in OPR-005 or categorization of communications		
	requested by the applications).		
CMR-008	The oneM2M System shall support data aggregation based on communication	Implemented	
See REQ-2015-	policies when exchanging data between the M2M	in Rel-1	
0564R02	Gateway/Device/Infrastructure Domain.		
CMR-009	The oneM2M System should support data compression based on	Not	
See REQ-2015-	communication policies when exchanging data between the M2M	Implemented	
0564R02	Gateway/Device/Infrastructure Domain.		
CMR-010	The oneM2M System shall support an additional randomized delay of	Implemented	
See REQ-2015-	communications, based on communication policies, when exchanging data	in Rel-2	
0564R02	between the M2M Gateway/Device/Infrastructure Domain.	Implemented	
CMR-011			
See REQ-2015-	Networks over given periods of time: attempted communications, failed	in Rel-2	
0564R02	attempts and successful attempts.		
CMR-012	The oneM2M System shall be able to restrict its own usage of the Underlying	Implemented	
See REQ-2015-	Networks, based on communication policies and on its monitored usage of	in Rel-2	
0564R02	them, when exchanging data between the M2M Gateway/Device/Infrastructure		
01/15 0/10	Domain.		
CMR-013	The oneM2M System shall be able to refrain from using its own usage of the	Implemented	
See REQ-2015-	Underlying Networks, based on a time-based back-off procedure configurable	in Rel-2	
0564R02	in communication policies, when exchanging data between the M2M		
OMB 044	Gateway/Device/Infrastructure Domain.		
CMR-014	The oneM2M System shall be able to restrict its own usage of the Underlying	Implemented	
See REQ-2015-	Networks, based on communication policies and on the date and time, when	in Rel-1	
0564R02	exchanging data between the M2M Gateway/Device/Infrastructure Domain.	las a la assausta al	
CMR-015	The oneM2M System shall be able to identify a series of data (e.g. Time Series	Implemented	
See REQ-2015-	Data) and indicate individual data belonging to this series.	in Rel-2	
0601R01	The analyze average shall support the data to be transmitted to laT platform	Not	
CMR-0016 See REQ-2017-	The oneM2M system shall support the data to be transmitted to IoT platform with strict timing and packet loss requirements, determined by the		
0001R03	application(s).	Implemented	
CMR-0017	The oneM2M system shall support the data to be transmitted from IoT platform	Not	
See REQ-2017-	to subscribed devices with highest priority, with strict timing and packet loss	Implemented	
0001R03	requirements, determined by the application(s).	Implemented	
CMR-0018	The oneM2M System shall be able to detect and report the missing data in time	Implemented	
See REQ-2017-	series, for each source of time sensitive data which is sent to the IoT platform.	in Rel-2	
0001R03	poenes, for each source of time scholling data which is sent to the for piationii.	1111161-2	
CMR-0019	The oneM2M System shall be able to detect and report the missing data in time	Implemented	
See REQ-2017-	series, for each time sensitive application receiving data.	in Rel-2	
0001R03	denos, for each time sensitive application receiving data.	1111101-2	
0001103	1		

NOTE 1: Long lived security context and registration is covered, M2M Sessions are not covered.

NOTE 2: CMDH policies (application side) is implemented, information from the Underlying Network can be utilized but the method for provisioning via Mcn is not covered.

6.8 LWM2M Interworking Requirements

Table 13: LWM2M Interworking Requirements

Requirement ID	Description	Release
LWM2M-001	The oneM2M System shall provide the capability to transparently transport	Implemented
See REQ-2015-	LWM2M Objects between LWM2M Clients and M2M Applications.	in Rel-2
0517R04		
LWM2M-002	The oneM2M System shall provide the capability to translate LWM2M Objects	Implemented
See REQ-2015-	into a semantic representation of the LWM2M Object as oneM2M resources.	in Rel-2
0517R04		
LWM2M-003	The oneM2M System shall provide the capabilities of the LWM2M Server in	Implemented
See REQ-2015-	order to interwork between LWM2M Clients and M2M Applications.	in Rel-2
0517R04		
LWM2M-004	The oneM2M System shall provide the capability for M2M Applications to	Implemented
See REQ-2015-	discover LWM2M Clients using the LWM2M Client's Endpoint Name.	in Rel-2
0517R04		
LWM2M-005	When transparently transporting LWM2M Objects, the oneM2M System shall	Not
See REQ-2015-	provide the capability for M2M Applications to discover the defining of LWM2M	implemented
0517R04	Objects transported by the oneM2M System.	
LWM2M-006	When interworking with LWM2M Objects, the oneM2M System shall provide the	Implemented
See REQ-2015-	capability for M2M Applications to discover a LWM2M Object using the LWM2M	in Rel-2
0517R04	Object's identifier.	
LWM2M-007	The oneM2M System shall provide capability to onboard devices that	Implemented
See REQ-2015-	incorporate a LWM2M Client.	in Rel-2
0517R04		
LWM2M-008	The oneM2M System shall provide the capability to interoperate the underlying	Implemented
See REQ-2015-	security mechanisms of the LWM2M Client with the security capabilities	in Rel-2
0517R04	provided by the oneM2M System.	

7 Non-Functional Requirements (informative)

This clause is intended to gather high-level principles and guidelines that shall govern the design of the oneM2M System. Such principles and guidelines are fundamental to the design of the oneM2M System. But as they cannot necessarily be expressed as requirements per se, they shall be introduced and expressed in this clause.

Table 14: Non-Functional Requirements

Requirement ID	Description	Release
NFR-001	Continua Health Alliance is incorporating a RESTful approach to its design. To support CHA, oneM2M should consider RESTful styles and approaches while in Redesigning the M2M architecture.	
NFR-002	The oneM2M System should communicate using protocols that are efficient in terms of amount of exchanged information over amount of exchanged data measured in bytes.	Implemented in Rel-1

Annex A (informative): Requirements for the next release

The requirements contained in this Annex are gathered and targeted for the next release of oneM2M.

- 1. Functional Requirements
 - 1.1 Overall System Requirements
 - 1.2 Management Requirements
 - 1.3 Semantics Requirements
 - 1.3.1 Ontology Related Requirements
 - 1.3.2 Semantics Annotation Requirements
 - 1.3.3 Semantics Query Requirements
 - 1.3.4 Semantics Mashup Requirements
 - 1.3.5 Semantics Reasoning Requirements
 - 1.3.6 Data Analytics Requirements
 - 1.4 Security Requirements
 - 1.5 Charging Requirements
 - 1.6 Operational Requirements
 - 1.7 Communication Management Requirements
 - 1.8 LWM2M Interworking Requirements
